SPKT (per %)	5 (5, 12, 15, 18, 20)	NA	NA

[†]Effect size for each variable of interest reflecting unit change.

Abbreviations: BMI, body mass index; CI, confidence interval; ESKD, end-stage kidney disease; HR, hazard ratio; NA, not applicable; NOS, Newcastle-Ottawa scale; PD, peritoneal dialysis; SPKT, simultaneous pancreas-kidney transplantation.

eTable 11. Meta-Regression of Primary Outcomes (Continued)

Covariate	Delayed Graft Function		
	No. of Studies (Reference)	OR (95% CI) [†]	P Value
Study Characteristics			
Risk of bias by NOS (per 1 point)	6 (2, 4, 5, 7, 13, 15)	1.02 (0.95 – 1.11)	0.449
Proportion of PD modality (per %)	5 (4, 5, 7, 13, 15)	0.99 (0.97 – 1.01)	0.135
Study population (adult vs. pediatric/mixed cases)	6 (2, 4, 5, 7, 13, 15)	1.16 (0.43 – 3.11)	0.706
Donor type (deceased vs. mixed cases/unspecified)	6 (2, 4, 5, 7, 13, 15)	1.05 (0.87 – 1.27)	0.516
Publication date (before 2015 vs. 2015 to 2022)	6 (2, 4, 5, 7, 13, 15)	NA	NA
Sample size (≤1,000 vs. >1,000)	6 (2, 4, 5, 7, 13, 15)	1.06 (0.86 – 1.20)	0.495
Study setting (single-center vs. multicenter)	6 (2, 4, 5, 7, 13, 15)	1.06 (0.86 – 1.30)	0.495
Study location (European vs. non-European region/international)	6 (2, 4, 5, 7, 13, 15)	1.06 (0.86 – 1.30)	0.495
Recipient Characteristics			
Recipient age (mean, per 1 year)	5 (2, 4, 7, 13, 15)	1.00 (0.97 – 1.03)	0.977
Female (per %)	5 (2, 4, 5, 13, 15)	1.00 (0.99 – 1.02)	0.480
BMI, (mean, per 1 kg/m ²)	3 (7, 13, 15)	1.02 (0.55 – 1.89)	0.743
White race, (per %)	2 (2, 5)	NA	NA
Etiology of ESKD by glomerulonephritis (per %)	1 (13)	NA	NA
Diabetes (per %)	2 (5, 15)	NA	NA
Dialysis vintage (mean, per 1 year)	2 (2, 13)	NA	NA
Donor and Peritransplant Characteristics			
Donor age (mean, per 1 year)	3 (7, 13, 15)	1.00 (0.84 – 1.20)	0.798
Living donor type (per %)	5 (2, 4, 7, 13, 15)	1.00 (0.99 – 1.01)	0.743
Cold ischemia time (mean, per 1 hr)	4 (2, 4, 7, 15)	0.96 (0.88 – 1.05)	0.216
SPKT (per %)	6 (2, 4, 5, 7, 13, 15)	NA	NA

[†]Effect size for each variable of interest reflecting unit change.

Abbreviations: BMI, body mass index; CI, confidence interval; ESKD, end-stage kidney disease; NA, not applicable; NOS, Newcastle-Ottawa scale; OR, odds ratio; PD, peritoneal dialysis; SPKT, simultaneous pancreas-kidney transplantation.

eTable 12. Publication Bias

Kidney Transplantation Outcomes	No. of Studies (Reference)	<i>P</i> Value for Begg's Test	<i>P</i> Value for Egger's Test
Primary Outcomes			
All-cause mortality	13 (5, 8, 12, 14, 15, 16, 17, 18, 20, 21, 22, 23, 25)	0.951	0.273
Overall graft failure	10 (5, 6, 8, 9, 12, 14, 16, 22, 23, 26)	0.721	0.947
Death-censored graft failure	5 (5, 12, 15, 18, 20)	0.806	0.609
Delayed graft function	6 (2, 4, 5, 7, 13, 15)	1.000	0.562
Secondary Outcomes			
Acute rejection	1 (22)	NA	NA
Graft vessel thrombosis	3 (1, 3, 19)	1.000	0.760
Oliguria (not producing urine in the first 24 hours)	1 (2)	NA	NA
de novo heart failure	1 (24)	NA	NA
NODAT	2 (10, 11)	NA	NA

Abbreviations: CI, confidence interval; NA, not applicable; NODAT, new onset diabetes mellitus after transplantation.

eTable 13. Quality of Evidence Synthesis and GRADE Evidence Profile of Outcomes

Outcomes (PD vs. HD)	No. of Studies (Ref)	Study Design (Sample Size)	Quality Assessment: Required Domains					Other Issues	Finding and Direction (Magnitude) of Effect	Strength of Evidence
			Study Limitations	Directions	Consistency	Precision	Reporting Bias			
All-cause mortality	13 (5, 8, 12, 14, 15, 16, 17, 18, 20, 21, 22, 23, 25)	Non-RCTs (221,815)	High	Direct	Inconsistency	Precise	Undetected	<ul style="list-style-type: none"> • Duration-response association could not be determined • Present plausible confounding that would decrease the observed effect[†] 	<ul style="list-style-type: none"> • Thirteen non-RCTs studies with a large sample size illustrated high study limitations and inconsistency of evidence findings based on the sensitivity analyses. • The summary pooled HR was 0.92 (95% CI, 0.84-1.01; $P=0.085$), with moderate degree of heterogeneity (I^2, 68.7%). 	Very low (trivial)
Overall graft failure	10 (5, 6, 8, 9, 12, 14, 16, 22, 23, 26)	Non-RCTs (209,287)	High	Direct	Inconsistency	Imprecise	Undetected	<ul style="list-style-type: none"> • Duration-response association could not be determined • Weak strength of association (magnitude of effect) 	<ul style="list-style-type: none"> • Ten non-RCTs studies with a large sample size showed high study limitations, inconsistency, and imprecise, which subjected to the set of sensitivity analysis. • The summary pooled HR was 0.96 (95% CI, 0.92-0.99; $P=0.024$), with moderate degree of heterogeneity (I^2, 37.2%). 	Very low (beneficial with PD)

[†]On the basis of the E-value.

Abbreviations: CI, confidence interval; GRADE, Grading of Recommendations Assessment, Development and Evaluation; HD, hemodialysis; HR, hazard ratio; PD, peritoneal dialysis. OR, odds ratio; RCTs, randomized-controlled trials.

eTable 13. Quality of Evidence Synthesis and GRADE Evidence Profile of Outcomes (Continued)

Outcomes (PD vs. HD)	No. of Studies (Ref)	Study Design (Sample Size)	Quality Assessment: Required Domains					Other Issues	Finding and Direction (Magnitude) of Effect	Strength of Evidence
			Study Limitations	Directions	Consistency	Precision	Reporting Bias			
Death-censored graft failure	5 (5, 12, 15, 18, 20)	Non-RCTs (96,439)	High	Direct	Consistency	Precise	Undetected	<ul style="list-style-type: none"> Duration-response association could not be determined Present plausible confounding that would decrease the observed effect[†] 	<ul style="list-style-type: none"> Five non-RCTs studies revealed high study limitations and consistency based on the sensitivity analyses results. The summary pooled HR was 0.98 (95% CI, 0.85-1.14; $P=0.811$), with moderate degree of heterogeneity (I^2, 73.7%). 	Very low (trivial)
Delayed graft function	6 (2, 4, 5, 7, 13, 15)	Non-RCTs (47,118)	High	Direct	Consistent	Precise	Undetected	<ul style="list-style-type: none"> Duration-response association could not be determined 	<ul style="list-style-type: none"> Six non-RCTs with high study limitations and low degree of heterogeneity (I^2, 10.4%). The summary pooled OR was 0.73 (95% CI, 0.70-0.76; $P<0.001$). The findings were robust with respect to a set of sensitivity analyses. 	Low (beneficial with PD)
Acute rejection	1 (22)	Non-RCTs (2,006)	High	Direct	Unknown	Precise	Suspected	<ul style="list-style-type: none"> Duration-response association could not be determined 	<ul style="list-style-type: none"> A single study with high study limitations by Balzer et al (2020)²² revealed statistical significance (OR, 0.70; 95% CI, 0.51-0.97; $P=0.029$). However, the uncertainty in terms of prediction interval could not be estimated. 	Insufficient data

[†]On the basis of the E-value.

Abbreviations: CI, confidence interval; GRADE, Grading of Recommendations Assessment, Development and Evaluation; HD, hemodialysis; HR, hazard ratio; OR, odds ratio; PD, peritoneal dialysis. OR, odds ratio; RCTs, randomized-controlled trials.
